REBEL LEADERS / FIELD TOOL 02

Deadline Reset

THE PRODUCT LEADER'S FIELD GUIDE

Find out what was promised, check what the team can deliver, and give the person responsible a clear choice.

Nic Payne

For you, the PM carrying this situation

OPEN YOUR LAB >

START WITH A REAL SITUATION. DECIDE WHAT HAPPENS NEXT.

WORKING EDITION / REBEL-LEADER.COM

The date has already been promised. Now what?

You find out that customers have been promised a launch date. The team has not finished checking the work. Somehow, you are now expected to make those two things fit.

Start with why the date matters

Is there an event booked? Has a customer planned around it? Ask what would happen if the date changed. You need to understand the promise before proposing a different one.

Find out what kind of date it is

A target is a date we would like to hit. An estimate is when the team currently thinks it can finish. A promise is something someone has told another person they can rely on. Ask which this is and what work it includes.

Give people a choice they can understand

Perhaps customers need online booking by the event, but reports could come later. Perhaps both features matter more than the date. Work through those options with the people building the software.

What you will leave with

The Lab helps you write down the facts, compare delivery options, and prepare an update asking for a decision. You can return after the meeting to record the answer.

> Start with one promised date. You are trying to work out what can be delivered and what people need to be told.

You can be frustrated and still be curious.

It is easy to hear an unrealistic date as “just work harder.” Before replying, separate that frustration from the question you need answered.

What actually happened?

Write down what was said or done. Then notice what you have added. “They asked for Friday” and “They do not care about the team” are different statements. You can check the first. You need to ask about the second.

Why do you care?

Who would be better off if this worked? A customer could stop chasing an answer. Your team could finish the work it promised. Start there. Give the other person a chance to tell you what matters to them too.

What would better look like?

Imagine the next few weeks going well. What would people be doing differently? Describe that in ordinary words, then ask the other person what they would add or change.

Keep these notes to yourself

Private notes in the Lab stay only in the open tab. They disappear when you refresh or leave and never appear in your exported documents. You can also think through these questions without typing.

> An opening you can adapt: “I want us to find a way through this. Can we look at what is happening and work out what to do next?”

What exactly have people been told?

“We promised November 1” is only the start. Promised what, to whom, and by whom?

Write down the promise

Name the date, the features or service promised, the people expecting it, and the person who told them. Quote the actual message if you can.

Check what really cannot change

For example, the event venue may be booked, but nobody has agreed which features must be shown. Ask the person responsible for the event or contract to confirm.

List what still needs checking

Does the booking page put appointments into the repair calendar? Can customers see only their own bookings? Has the team tested those things, or are we assuming they work?

Explain what is at risk

Say what customers could experience if the plan does not work. “A customer books a repair but the service team never receives it” is more useful than “integration risk.”

> Try: “I know the event is fixed. Can we check exactly what customers have been promised for that day?”

What could we change?

Ask the team what each option would take. A smaller promise still needs to be useful to the customer.

Keep the date; do less

Could customers book repairs on November 1, with downloadable service reports added later? Name what would be ready and what would wait.

Keep all the work; reconsider the date

Ask the people doing the work when both features could be ready and what they still need to check. If they cannot give a reliable date yet, say when they will reassess it.

Check whether more help would help

A new person needs time to learn the work. A specialist might remove a specific problem. Include the time needed to teach, review, and test; do not assume extra people instantly make delivery faster.

Keep the necessary checks

Name the security, safety, and quality checks that must still happen. Explain the consequences of skipping them. Ask the people responsible for those checks to confirm the plan.

> Try: “We may be able to have booking ready for the event if reports come later. If both must be ready together, we need to review the date.”

How confident are we, and why?

“Medium confidence” is not much help on its own. Explain which work and date you mean, and what could change your view.

Name the plan you are assessing

“Online booking by November 1” is different from “booking and reports by November 1.” Make sure everyone is talking about the same promise.

Say what you know

For example, the booking page is built and reviewed. The engineering lead has estimated the work left. Explain what those estimates are based on.

Say what you still need to find out

The engineering lead will check the calendar connection on Thursday. Until then, the date depends on that check succeeding.

Agree what happens if the check fails

Who will decide whether to show a demonstration instead? When must customers be told? Make that plan now, while there is still time to act.

> The Lab does not calculate the chance of hitting a date. It helps you explain your judgment and what you will check next.

Give them something they can decide.

Bring a short recommendation, the reason for it, and the alternatives. Leave room for information you do not have.

Open with the customer need

“Customers need to see online booking at the event. I want to keep that useful. Here is what the team has checked and what is still uncertain.”

If the answer is “the date cannot move”

“Understood. Which parts must be ready that day, and which could come later?” Bring the team into checking whether the smaller plan is possible.

If the answer is “just add people”

“Which part would another person help with? Who would get them started and check their work?” Ask the team to assess that option.

Ask for a decision and record the response

Name the person who can change the promise and when you need an answer. Record what they actually agree, decline, or ask you to check. Update customers through the person responsible for that relationship.

> Try: “I recommend focusing on booking for the event and adding reports later. Can we agree that, then confirm the customer message after Thursday's check?”

Online booking by November 1. Reports too?

Fictional example: a sales director has promised online repair booking and downloadable service reports for a customer event. The event is fixed. The connection between booking and the repair calendar has not been tested.

What the product manager finds out

Customers need to see how booking will work at the event. No contract requires downloadable reports that day. The engineering lead needs to test the calendar connection before confirming the smaller plan.

The recommendation

Keep the event, aim for working online booking, and explain that reports will come later. Confirm what we can promise after Thursday's calendar check.

The conversation

The product manager asks the sales director to agree that reports can come later. They also agree to show a demonstration only if Thursday's calendar check fails. The sales director will explain any change to customers.

What happens next

In this example, the sales director accepts the recommendation on Wednesday. The engineering lead checks the calendar connection on Thursday. They review the result before confirming what customers can use on November 1. The Lab example starts before this agreement.

> The event still matters. The team now knows what to check, and customers can be told what to expect.

Work through one promised date.

Open the Lab from your Start page. You can come back to the Guide whenever a question needs more thought.

The promise

Record what was promised, why the date matters, and what is still uncertain. Build Deadline Facts if you need to check your understanding with someone.

Options

Write down what could be ready on the date, what a later date might allow, and whether extra help would be useful. Build Delivery Options to compare them.

How sure are we?

Choose your current confidence, explain it, and name the next check. Say what you will do if that check changes the plan.

The update

Write the decision you need, who can make it, and when. Build Decision Update while it is still a proposal. Return after the meeting to record the response, then rebuild and share the updated version.

> Load Examples fills only the step you are on. If it would replace existing answers, you will be asked first.

Did anything actually change?

A completed form can look satisfying. The useful part is what people do with it.

Follow up

Check that the customer message and the team's plan say the same thing. Return after the promised technical check. If the result changes what you can deliver, tell the people relying on the date.

Try saying it out loud

Read your proposed message to someone you trust. Ask where they got lost or what sounded strange. Could you say this to the person in a real meeting? Change anything you would have to translate as you spoke.

Keep the record

Copy, download, or print anything you need to keep. Shared answers save in this browser on this device; they do not follow you to another device. Private notes are not saved. Export before clearing a draft or browser data.

Check what happened

Was the decision understood? Did someone act? Did the change help the people it was meant to help? If nobody responded, find out who can decide and agree when to ask again. Silence does not mean yes.

> You do not have to fix the whole organization in one conversation. Leave knowing what happens next, who will do it, and when you will check back.
