REBEL LEADERS / FIELD TOOL 03

Priority Whiplash

THE PRODUCT LEADER'S FIELD GUIDE

Find out what is really needed, show what would have to wait, and get a decision everyone can work from.

Nic Payne

For you, the PM carrying this situation

OPEN YOUR LAB >

START WITH A REAL SITUATION. DECIDE WHAT HAPPENS NEXT.

WORKING EDITION / REBEL-LEADER.COM

One more thing. And it is urgent.

The team already has a full week. Then another request arrives. It may be a good idea. It may even be the most important thing. But what happens to the work people are already waiting for?

Find out what is needed

A request to show a customer a new screen could mean a sketch, a clickable demonstration, or working software. Ask before treating those as the same amount of work.

Check whether it fits

List the work already promised and ask the team what the new request would take. Include support, testing, and review. Sometimes it fits. If it does not, something needs to change.

Make a recommendation

Could you do a smaller version? Put something else off? Use work you already have? Describe the choices and explain which you recommend.

Get a clear answer

If you are allowed to make the call, make it and tell the people affected. If it changes commitments someone else owns, take the recommendation to them. Record what is decided.

> You are not trying to win an argument about being busy. You are trying to make a plan people can actually follow.

You can be frustrated and still be curious.

A new urgent request can feel like nobody remembers the promises you are already trying to keep. That feeling is worth noticing before you write the reply.

What actually happened?

Write down what was said or done. Then notice what you have added. “They asked for Friday” and “They do not care about the team” are different statements. You can check the first. You need to ask about the second.

Why do you care?

Who would be better off if this worked? A customer could stop chasing an answer. Your team could finish the work it promised. Start there. Give the other person a chance to tell you what matters to them too.

What would better look like?

Imagine the next few weeks going well. What would people be doing differently? Describe that in ordinary words, then ask the other person what they would add or change.

Keep these notes to yourself

Private notes in the Lab stay only in the open tab. They disappear when you refresh or leave and never appear in your exported documents. You can also think through these questions without typing.

> An opening you can adapt: “I want us to find a way through this. Can we look at what is happening and work out what to do next?”

What are we already asking people to do?

Use names people recognize. “Fix the broken invitation link” tells us more than “onboarding improvement.”

Start with the people waiting

A new customer cannot join their account. Another customer is waiting for corrected report figures. Describe the work and who needs it.

Include work that is easy to overlook

Customer support, checking changes, meetings, and maintenance all use time. They do not disappear because they are missing from the feature list.

Describe the new request

Who asked, what do they need, and by when? Find out what they will use it for. In our example, the customer needs to react to a proposed report screen on Friday.

Check the deadline

Ask what confirms the timing. A booked customer meeting is different from a preferred date. Record what you have checked and what you still need to ask.

> Try: “What does the customer need to see on Friday? Would the sketches we already have be useful, or do they need to click through it?”

What would have to wait?

Work through the options with the people doing the work. Do not turn “we will squeeze it in” into a plan.

Name the work that changes

In the example, a simple demonstration takes two days of team effort. That would mean putting off two days of work correcting a customer's report. Say who needs to know.

Use the time check if it helps

One person-day means one person working for one day. Two people each working for one day add up to two person-days. Compare available time and required work over the same dates. Include review and support.

Understand what the numbers can tell you

Ten days available, ten already needed, and two more requested means the entered plan needs twelve days of effort. The extra two must be addressed. It does not tell you the new finish date; ask the team about skills, waiting, and the order of work.

Keep another option open

Perhaps the existing sketches would do. Perhaps the demonstration can wait. Protect essential checks and customer promises, and explain the consequences of each choice.

> Changing the written recommendation does not change the calculator. Its numbers describe the work you entered before the proposed change.

What do you think we should do?

The person making the call needs more than a list of problems. Give them your recommendation and the reason for it.

Make the choice specific

“Prepare the small demonstration and postpone the report correction” is a choice. “Be more flexible” is not enough for anyone to act on.

Explain who benefits and who waits

The customer in Friday's meeting can react to the idea. The customer waiting for correct report figures waits longer. Both belong in the conversation.

Find the person who can make the call

Use a real name. Who can approve changing these customer commitments? If that is you, decide within your authority and communicate the change.

Say when an answer is needed

In the example, Wednesday afternoon gives the team time to change the plan and tell the account manager by Thursday morning.

> Try: “I recommend the small demonstration, with the report correction moved back. We need a decision by Wednesday so we can tell the people affected.”

Keep bringing it back to the actual work.

People may see a consequence you have missed. Listen, check the facts, and adjust the recommendation where needed.

“They are all top priority”

“Which should the team work on first? If the new request goes first, are we agreeing that the report correction waits?”

“It is only a day or two”

“Does that include checking and testing it? Let us ask the people doing the work before we promise.”

“Nothing can move”

“Could we make the demonstration smaller, use the existing sketches, or change the date?” If none works, record the unresolved decision rather than silently assuming overtime.

“This is an emergency”

Follow the incident process if it is a real emergency. Name who can authorize the interruption, which work pauses, and when the temporary arrangement will be reviewed.

> Try: “I can see why Friday matters. Here is what we could do, and what would have to wait. Can we choose a plan together?”

A Friday demonstration meets a full week.

Fictional example: the team is fixing a broken account invitation, checking customer-data security, and correcting inaccurate report totals. The sales director now wants a demonstration for Friday.

What is already promised

New customers need the invitation fix. The next software update needs security checks. An existing customer needs corrected report figures. Support and review are included in the team's estimate of ten days of work.

What the new request means

The customer wants to react to a proposed report screen. A simple clickable demonstration would take two more days. The team has ten days of work time between them before Friday, and all ten are already needed.

The recommendation

Make a simple clickable demonstration and put off two days of work on the incorrect report totals. Check the new report-fix date with the team before promising it.

The decision and follow-up

In this example, the product director agrees on Wednesday to postpone the report correction. The team checks its new finish date. The product manager updates the plan; the account manager tells the affected customer. They review what happened after Friday's meeting. The Lab example starts before the decision.

> If the new work had fitted, there would have been no need to invent a tradeoff. Here it does not fit, so the people involved make a clear choice.

From a new request to a clear answer.

Bring one new request and the work it competes with. You can prepare alone, then check your assumptions with the team.

Current work

List the current commitments, the new request, and why it matters now. Build Current Work List if you want someone to check it.

What changes

Check the time available if useful. Write what would wait, who would be affected, and another option. Build What Would Change to review the consequences.

Recommend

Write your recommendation, name the person who can decide, and say when you need an answer.

Record

Keep the status as PROPOSAL before the conversation and leave the actual decision blank. Build Priority Decision Brief. After the conversation, record the response, update who will do what, and rebuild the brief.

Copy, download, or print the brief to take into your usual work tools. The Lab does not send it or change the team's plan. Use Load Examples to see fictional answers for the current step. You will be asked before existing answers are replaced.

Did anything actually change?

A completed form can look satisfying. The useful part is what people do with it.

Follow up

Check that people followed the agreed choice. Did the postponed work actually wait, or did the team end up doing both? Were the affected customers told? Use what happened to improve the next decision.

Try saying it out loud

Read your proposed message to someone you trust. Ask where they got lost or what sounded strange. Could you say this to the person in a real meeting? Change anything you would have to translate as you spoke.

Keep the record

Copy, download, or print anything you need to keep. Shared answers save in this browser on this device; they do not follow you to another device. Private notes are not saved. Export before clearing a draft or browser data.

Check what happened

Was the decision understood? Did someone act? Did the change help the people it was meant to help? If nobody responded, find out who can decide and agree when to ask again. Silence does not mean yes.

> You do not have to fix the whole organization in one conversation. Leave knowing what happens next, who will do it, and when you will check back.
